

Remarks/Arguments

This communication is considered fully responsive to the first Office action mailed October 2, 2003. Claims 1-74 were examined and stand rejected. No claims were amended. Claim 51 has been deemed allowable if written in independent form to include all of the limitations of the base claim and any intervening claims. No claims were canceled. No claims were added. Reexamination and reconsideration of claims 1-74 are respectfully requested.

Claim Rejections – 35 U.S.C. § 102

The Examiner rejects claims 1-4, 6-13, 15-20, 43-47, 53-64, 66, 68-69, and 71-74 stand rejected under 35 U.S.C. 102(e) as being purportedly anticipated by U.S. Patent No. 6,115,050 to Landau et al. ("Landau"). The Applicant respectfully traverses this rejection.

The Examiner improperly construes the silhouette edges in Landeau as representing Applicant's claimed "anti-aliased lines". The Examiner states that Landau discloses silhouette edges that are rendered to perform antialiasing. This assertion is incorrect. Landau does not disclose rendering the silhouette edges to perform antialiasing. Instead, Landau explains that the silhouette edges are being antialiased. Col. 2, lines 63-65.

Furthermore, Landau discloses that the silhouette edges are being antialiased by creating anti-aliasing polygonal primitives, which are along-side or adjacent to a silhouette edge and vary in opacity. See e.g., Col. 10, line 64 to Col. 11, line 6. The colors of pixels within these adjacent primitives are changed. Such anti-aliasing primitives are shown as triangles 150 in FIG. 14 and as strips 104 and

1 fans 106 in FIG. 9 and clearly do not anticipate the "antialiased lines" that are used
2 to overdraw edges in Applicant's claim 1.

3 The Examiner also misinterprets FIG. 2 as illustrating "the processing of a
4 line segment for reducing aliasing effect in an object image". However, FIG. 2
5 "illustrates aliasing effects on a line displayed at low resolution." Landau, Brief
6 Description of the Drawings. Landau refers to FIG. 2 in the Background of the
7 Invention as an example of the undesirable effect of aliasing. FIG. 2 does not show
8 or suggest any processing that reduces the effect of aliasing, much less to do so by
9 "overdrawing the discontinuity edges as antialiased lines," as positively recited in
10 Applicant's claim 1.

11 Landau also fails to disclose or suggest "overdrawing" discontinuity edges
12 as anti-aliased lines, as positively recited in Applicant's claim 1. The Examiner
13 makes a bare assertion that the "edges *must be* drawn many times by the primitive
14 pipeline to determine silhouette edges that are anti-aliased." However, this
15 assertion is not supported by the description in Landau. Instead, Landau describes
16 using "the information about the number of times particular edges were drawn to
17 determine which edges . . . lie at the silhouette edge of an object." Col. 2, lines 58-
18 61. These edges are then anti-aliased in Landau, Col. 2, lines 63-65. Furthermore,
19 it is again noted that the edges Landau is referring to are those of the object being
20 antialiased, and not the antialiased lines recited in Applicant's claim 1.

21 As explained in Applicant's response to the first office action, Landau only
22 discloses joining polygonal primitives to a silhouette edge to anti-alias the
23 silhouette edge. For example, triangles 150 are joined to one edge of the
24 triangle 108 in FIG. 14. Having defined these triangles 150, Landau discloses
25 only calculating and setting colors for pixels in each of the triangles 150 and does

1 not disclose or suggest overdrawing the rendered discontinuity lines of the
2 polygon as antialiased lines. Instead, Landau's silhouette edges are merely
3 supplemented by newly color-calculated pixels in newly created polygonal
4 primitives located outside and adjacent to the triangle 108.

5 The systems and techniques disclosed and suggested in Landau fail to
6 anticipate the recited invention. For the foregoing reasons, claim 1 is believed to
7 be allowable over Landau. Withdrawal of the rejection is respectfully requested.

8 Claims 2-4 and 6-11 depend from claim 1, which is believed to be
9 allowable. Therefore, claims 2-4 and 6-11 are believed to be allowable for at least
10 the same reasons as claim 1. Withdrawal of the rejection of claims 2-4 and 6-11 is
11 respectfully requested.

12 Claim 12 also recites "overdrawing the discontinuity edges as antialiased
13 lines", just as claim 1 does, and claims 13 and 15-20 depend from claim 12.
14 Therefore, claims 12-13 and 15-20 are believed to be allowable for at least the
15 same reasons as claim 1. Withdrawal of the rejection of claims 12-13 and 15-20 is
16 respectfully requested.

17 Claim 43 recites "overdrawing the silhouette edges as antialiased lines", in
18 a manner similar to claim 1, and claims 44-47 depend from claim 43. Therefore,
19 claims 43-47 are believed to be allowable for at least the same reasons as claim 1.
20 Withdrawal of the rejection of claims 43-47 is respectfully requested.

21 Claim 53 recites "overdrawing discontinuity edges of the polygonal mesh
22 as antialiased lines", in a manner similar to claim 1, and claims 54-62 depend from
23 claim 53. Therefore, claims 53-62 are believed to be allowable for at least the
24 same reasons as claim 1. Withdrawal of the rejection of claims 53-62 is
25 respectfully requested.

1 Claim 63 recites "an overdrawer configured to overdraw the discontinuity
2 edges as antialiased lines", in a manner similar to claim 1, and claims 64, 66, and
3 68 depend from claim 63. Therefore, claims 63-64, 66, and 68 are believed to be
4 allowable for at least the same reasons as claim 1. Withdrawal of the rejection of
5 claims 63-64, 66, and 68 is respectfully requested.

6 Claim 69 recites a graphical computing device to "overdraw the
7 discontinuity edges as antialiased lines", in a manner similar to claim 1, and
8 claims 71-73 depend from claim 69. Therefore, claims 69 and 71-73 are believed
9 to be allowable for at least the same reasons as claim 1. Withdrawal of the
10 rejection of claims 69 and 71-73 is respectfully requested.

11 Claim 74, as amended, recites "means for overdrawing the sharp edges and
12 the silhouette edges as antialiased lines", in a manner similar to claim 1.
13 Therefore, claim 74 are believed to be allowable for at least the same reasons as
14 claim 1. Withdrawal of the rejection of claims 74 is respectfully requested.

15
16 **Claim Rejections – 35 U.S.C. § 102**

17 The Examiner rejects claims 1-50 and 52-74 under 35 U.S.C. 102(e) as
18 being purportedly anticipated by U.S. Patent No. 5,742,277 to Gossett et al.
19 ("Gossett"). The Applicant respectfully traverses this rejection.

20 First, it is noted that although the Examiner rejects claims 21-27 under
21 Section 102(e) on page 10 of the Office action, the Examiner did not provide any
22 explanation at all of a Section 102(e) rejection with regard to claims 21-27. On
23 page 12 of the Office action, the Examiner discusses the specific Section 102
24 rejection of claims 15-20 and then goes on to discuss the specific Section 102
25 rejection of claim 28, without any discussion of the rejection of claims 21-27.

1 Therefore, the Applicant believes that the rejection of claims 21-27 appearing on
2 page 10 of the Office action is a typographical error, as Gossett does not disclose
3 or suggest the limitations set forth in claims 21-27. However, if the Examiner
4 wishes to maintain a Section 102 rejection of claims 21-27, the Applicant requests
5 that the Examiner provide appropriate support for the rejection of claims 21-27 as
6 required by 37 C.F.R. 1.104(c)(2).

7 Second, it is noted that the Examiner refers to the Gossett reference as U.S.
8 Patent No. 6,115,050. However, the Applicant believes that this is a typographical
9 error, and that the Examiner intended the rejection to be in view of U.S. Patent
10 No. 5,742,277 to Gossett. The following argument is based on this belief.

11 Turning now to claim 1, Gossett fails to disclose or suggest "overdrawing
12 the silhouette edges as antialiased lines" as positively recited by the Applicant.
13 Instead, Gossett discloses estimating a background color of the edge pixel based
14 on foreground colors of neighboring pixels and interpolating between the
15 foreground color and estimated background color to determine an output color of
16 the edge pixel. *See, e.g.*, Col. 4, lines 14-32.

17 The Examiner cites to steps 1010-1011 in FIG. 10 as disclosing
18 overdrawing the discontinuity edges as antialiased lines. However, step 1010
19 merely recites performing antialiasing of internal edges, and step 1011 merely
20 recites performing antialiasing of external edges. There is no disclosure or
21 suggestion that the disclosed antialiasing is by overdrawing the silhouette edges as
22 antialiased lines.

23 The Examiner also cites to Col. 9, lines 14-20 and concludes that the
24 silhouette edges 808 and 809 in FIG. 8 are antialiased corresponding with
25 antialiased lines. However, this merely explains a method for differentiating

1 between external and internal edges. Again, there is no disclosure or suggestion
2 that the antialiasing is by overdrawing the silhouette edges as antialiased lines.

3 For the foregoing reasons, claim 1 is believed to be allowable over Gossett.
4 Withdrawal of the rejection is respectfully requested.

5 Claims 2-11 depend from claim 1, which is believed to be allowable.
6 Therefore, claims 2-11 are believed to be allowable for at least the same reasons as
7 claim 1. Withdrawal of the rejection of claims 2-11 is respectfully requested.

8 Claim 12 also recites "overdrawing the discontinuity edges as antialiased
9 lines", just as claim 1 does, and claims 13-20 depend from claim 12. Therefore,
10 claims 12-20 are believed to be allowable for at least the same reasons as claim 1.
11 Withdrawal of the rejection of claims 12-20 is respectfully requested.

12 Claim 28 was rejected as being inherently anticipated by Gossett. "To
13 establish inherency, the extrinsic evidence must make clear that the missing
14 descriptive matter is necessarily present in the thing described in the reference,
15 and that it would be so recognized by persons of ordinary skill. Inherency,
16 however, may not be established by probabilities or possibilities." MPEP §2112
17 citing *In re Robertson*, 49 U.S.P.Q.2d 1949, 1950-51 (Fed. Cir. 1999).

18 The Examiner relies on item 404 in FIG. 4 as inherently disclosing
19 Applicant's claimed steps of "identifying sharp edges prior to runtime" and
20 "finding silhouette edges in the polygon mesh during runtime using the data
21 structure". Item 404 is an operational block of a computer graphics system 402 for
22 "other graphical processing devices". There is no discussion of these other
23 graphical processing devices, or the function of these devices, other than to
24 provide data to the blend unit 406. There is no disclosure or suggestion that the
25

1 other graphical processing devices in Gossett are capable of identifying sharp
2 edges prior to runtime.

3 The Examiner also relies on item 402 in FIG. 4 as inherently disclosing
4 Applicant's claimed step of "constructing a data structure prior to rendering a
5 polygon mesh". Item 402 is simply a high level depiction of a computer graphics
6 system. There is no discussion of how this computer graphics system could be
7 implemented to perform the step of "constructing a data structure prior to
8 rendering a polygon mesh".

9 The Examiner further relies on item 502 in FIG. 5 as inherently disclosing
10 Applicant's claimed step of "collecting the sharp edges and the silhouette edges in
11 a list to form discontinuity edges of the polygon mesh." Item 502 is simply a
12 frame buffer entry. There is no discussion or suggestion of how the frame buffer
13 entry could be implemented to perform the step of "collecting the sharp edges and
14 the silhouette edges in a list to form discontinuity edges of the polygon mesh."

15 Notwithstanding the admitted absence of any specific disclosure or
16 suggestion of the recited features of claim 28 in Gossett, the Office action fails to
17 provide any basis in fact and/or technical reasoning to reasonably support the
18 determination that the allegedly inherent characteristics necessarily flow from the
19 teachings of Gossett. If the Examiner wishes to maintain a rejection of claim 28
20 on the basis of inherency in Gossett, the Applicant requests that the Examiner
21 provide appropriate rationale for the rejection as required by applicable case law.
22 *Ex parte Levy*, 17 U.S.P.Q.2d 1461, 1464 (Bd. Pat. App. & Inter. 1990). In the
23 absence of such rationale, the Applicant requests allowance of claim 28.

24 The disclosure in Gossett is insufficient to support a rejection based on
25 inherency. Furthermore, the Office action fails to provide any basis in fact and/or

1 etc. in support of a rejection based on inherency in view of the Gossett reference.

2 Therefore, withdrawal of the rejection of claim 28 is respectfully requested.

3 Claims 29-32 depend from claim 28, which is believed to be allowable.

4 Therefore, claims 29-32 are believed to be allowable for at least the same reasons
5 as claim 28. Withdrawal of the rejection of claims 29-32 is respectfully requested.

6 Claim 33 recites computer-executable instructions that perform the method
7 in claim 28. Therefore, claim 33 is allowable for at least the same reasons as claim
8 28.

9 Claim 34 recites "overdrawing the discontinuity edges" in a manner similar
10 to claim 1, and claims 35-41 depend from claim 34. Therefore, claims 34-41 are
11 believed to be allowable for at least this reason, as discussed above for claim 1.
12 Withdrawal of the rejection of claims 35-41 is respectfully requested.

13 Claim 42 recites computer-executable instructions that perform the method
14 in claim 21. Therefore, claim 42 is allowable for at least the same reasons as claim
15 21.

16 Claim 43 recites "overdrawing the silhouette edges as antialiased lines", in
17 a manner similar to claim 1, and claims 44-47 depend from claim 43. Therefore,
18 claims 43-47 are believed to be allowable for at least the same reasons as claim 1.
19 Withdrawal of the rejection of claims 43-47 is respectfully requested.

20 Claim 48 recites "overdrawing the silhouette edges as antialiased lines", in
21 a manner similar to claim 1, and claims 49-50 and 52 depend from claim 48.
22 Therefore, claims 48-50 and 52 are believed to be allowable for at least the same
23 reasons as claim 1. Withdrawal of the rejection of claims 48-50 and 52 is
24 respectfully requested.

25 Claim 51 is indicated as containing allowable subject matter.

1 Claim 53 recites "overdrawing discontinuity edges of the polygonal mesh
2 as antialiased lines", in a manner similar to claim 1, and claims 54-62 depend from
3 claim 53. Therefore, claims 53-62 are believed to be allowable for at least the
4 same reasons as claim 1. Withdrawal of the rejection of claims 53-62 is
5 respectfully requested.

6 Claim 63 recites "an overdrawer configured to overdraw the discontinuity
7 edges as antialiased lines", in a manner similar to claim 1, and claims 64-68
8 depend from claim 63. Therefore, claims 63-68 are believed to be allowable for at
9 least the same reasons as claim 1. Withdrawal of the rejection of claims 63-68 is
10 respectfully requested.

11 Claim 69 recites a graphical computing device to "overdraw the
12 discontinuity edges as antialiased lines", in a manner similar to claim 1, and
13 claims 70-73 depend from claim 69. Therefore, claims 69-73 are believed to be
14 allowable for at least the same reasons as claim 1. Withdrawal of the rejection of
15 claims 69-73 is respectfully requested.

16 Claim 74 recites "means for overdrawing the sharp edges and the silhouette
17 edges as antialiased lines", in a manner similar to claim 1. Therefore, claim 74 is
18 believed to be allowable for at least the same reasons as claim 1. Withdrawal of
19 the rejection of claim 74 is respectfully requested.
20
21
22
23
24
25

1 Allowable Subject Matter

2 It has been indicated that claim 51 would be allowable if written in
3 independent form to include all of the limitations of the base claim and any
4 intervening claims. However, claim 51 depends from claim 48 and is believed to
5 be allowable, as discussed above. Therefore, claim 51 is allowable, and
6 withdrawal of the rejection is respectfully requested.
